

Information Builders is one of the largest independent software companies in the world. We work with over 11,000 customers to ensure their success by putting interactive and actionable information in the hands of everyone in the extended enterprise: employees, partners, suppliers, and customers.

WebFOCUS Services for Java™ Environments plugs business intelligence right into the Java architecture, providing superior scalability and eliminating limits for deployment and reach of business intelligence applications.

“Utilizing your IT capital investment better is a key lesson that we got from Information Builders.”

– Kevin Elliot,
PricewaterhouseCoopers,
Business Process
Outsourcing

WebFOCUS Services for Java™ Environments

Enabling Rapid ROI for Java-Based Business Intelligence Applications

Organizations today face intense pressure to see a quick return on investment in information technology. The key is broad delivery of information to everyone who impacts key business processes – with a rapid time-to-market and low total cost-of-ownership.

WebFOCUS Services for Java™ Environments helps organizations meet this challenge by eliminating limits for deployment and increasing reach of business intelligence applications. WebFOCUS, always known for superior scalability, now takes advantage of the processing efficiencies of Java-based application servers to deploy more applications to more people using the same hardware and software at a lower per-user cost.

A Flexible Scalable Architecture

The Java Enterprise Edition platform, commonly known as J2EE, has become a stable and recognized standard for building Internet, intranet, and extranet applications. As the market adoption of this standard has increased, so has the need for quality business intelligence solutions that leverage the unique processing efficiencies of Java-based application servers.

More and more, companies are seeking to harness these valuable stores of information relating to business processes, operations, sales, and supply chains. Information Builders offers a powerful, comprehensive solution with WebFOCUS Services for Java Environments.

WebFOCUS Services for Java Environments provides a stable, robust business intelligence platform for supplying rich, data-based content to Java application servers. WebFOCUS works across your entire enterprise, regardless of individual Web architectures, application platforms, operating systems, data sources, and end user tools.

Most importantly, WebFOCUS enables you to build and deploy business intelligence applications to unlimited numbers of diverse people across the enterprise – employees, managers, partners, suppliers, customers, and citizens – delivering real-time information.

Features

Support for major application servers:

- IBM WebSphere
- BEA WebLogic
- Sun/Netscape iPlanet
- Microsoft IIS with New Atlanta ServletExec

On-server deployment of business intelligence applications

Flexible deployment options:

- Deploy across a single server with all integrated components on one machine (all-in-one servlet)
- Deploy on multiple servers with component-based JavaBean™ interfaces

Leverage existing load balancing and pooling capabilities

Adherence to all Java 2 standard architecture guidelines and support for cross-platform deployment using the same code

Native access to more than 85 data sources, including Oracle, CICS, SML, and SAP on over 35 platforms, including NT, Solaris, MVS, Red Hat, and Linux

Scheduled, event-driven, and on-demand information delivery

Security support at all levels, internal and external:

- System
- Database
- Application
- Field-value

Benefits

Rapid integration of business intelligence applications with existing Java development environment

More efficient processing of requests

Easily scales to support any number of users

Realize efficiencies of scale as applications are deployed across heterogeneous networks

- More robust performance and support
- An expanded developer knowledge base; standards mean more developers have the skill sets you need
- Immediate compatibility and deployment

- Real-time information delivery
- Leverages existing infrastructure
- Rapid integration of all sources
- Portable, scalable architecture

Business problems addressed in real time by delivering timely information to decision-makers in the formats they use every day – e-mail, Web pages, Excel, wireless devices, PDF

- Integrity of data and systems
- Reliability and business continuity
